**DATE:** August 8, 1997  
**RE:** GHR Foundry - PRP oversight  
Trip Report - August 4, 1997

EPA Region 5 Records Ctr.

247446

On August 4, 1997, at 0845 hours, START member Tom Campbell traveled to the GHR Foundry site and met with Michael May of Weston Environmental. Laidlaw Environmental was on site to pump out the drums containing nonregulated waste oil and to pick up drums containing solvent liquid. START oversaw 30 55-gallon drums and one 250-gallon tank containing nonregulated waste oil pumped into a tanker truck. Approximately 700 gallons of waste oil was collected for disposal. Once pumping was completed, a few of the empty waste oil drums and six 55-gallon drums (five of which were overpacked into 85-gallon drums) of solvent liquid were loaded onto a box truck for disposal. In addition, one 10 yd<sup>3</sup> rolloff box was loaded with PCB-contaminated debris and transported for disposal. The remaining empty waste oil drums were collected for disposal on August 5, 1997.

The only remaining waste on site includes two 55-gallon drums containing solid waste and approximately 60 empty drums collected from around the site. The underground storage tanks will be removed later this fall.

Please call me at the Cincinnati office (513-771-9314) if you have any questions pertaining to the GHR Foundry site.

Sincerely,

John Sherrard  
E & E START Project Manager
